The U.S. forklift division stationed in Cleveland has a professional team knowledgeable in Product Sales, Purchasing, Marketing, Logistical and Technical Support.

Start-up of the lift truck business

At first the domestic lift truck market in Korea was an open import enterprise. Korea Machinery Co. Ltd. begun in 1960, to import fully assembled forklifts as part of a domestic machinery expansion project. Sales of these products were initially targeted to state-run companies, large scale organizations, and the military. This eventually led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun trade operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical instruction became the new focus for enhancing quality and product development.

Forklift Export Expansion

Domestic forklift trade for Daewoo started in 1967 and grew to an astounding 90% market share in Korea. By the 1980's, Daewoo's advanced technological enhancements combined with sales success placed them in a situation of significant expansion of their lift truck business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a joint venture project to assist them in the highly competitive North American materials handling market. This project proved highly lucrative for Daewoo and their forklift product sales expanded greatly. In 1984, the company finished construction of a new facility to help in manufacturing high end value-added goods for export. In 1993, the company had a global sales system and started exporting versions they had established through in-house expertise, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into international marketplaces.
